

# Future of Education

*action: survey*

**G**lobalisation, technological innovations, climate and demographic changes and other major trends are creating both new demands and opportunities that individuals and societies need to effectively respond to.

There are increasing demands on schools to prepare students for more rapid economic and social change, for jobs that have not yet been created, for technologies that have not yet been invented, and to solve social problems that have not been anticipated in the past.

2030 may seem a long time away but this is the world in which those who are beginning primary school today will start their professional careers and those who are in secondary school today will become the core group of the prime working age. (source: <http://www.oecd.org>)

Can you be instrumental in designing a school for the future? What will the buildings, environment and learning spaces look like? What will the core curriculum be made up of? Will the role of teacher / learner be different? What part will technology play?

Think about your own school environment. Can you make any suggestions for improvement based upon solid research? What would you change and why? Can you arrange to pitch your ideas to Mr. Woods/Dr. Hawley?

## GLOBAL CHALLENGE

### The problem

there is not enough choice in school right now with the subjects and options that we have to study. Dr Hawley makes sure that the future of ecolint stays as a community and grows in great ways.

### What can we change?

- Technology
- Online Schooling
- Different Timetables (time you end)
- new subjects
- New Extra- curricular activities
- Green schooling
- More Recycling
- Choice of subjects

### These are some less major points

- Transportation
- longer/shorter days
- Amount of time at break times/lunch
- Sometimes online school
- Amount of exams

## LOCAL ACTION

Our local action is to contact students and teachers to ask what their opinions are about the future of education and what they would like to change about their school day. We chose this action because we would like to know what people think about and what could change in their school and what they would like to see in the future.

## EXPERT CONSULTED

David Hawley,  
Director, Ecolint.

Billiana Vassileva,  
Social Innovation Coach,  
Consultant & Trainer.

## Local Action: Contact pupils and teacher on their opinions about the future of education
